SUMMARY

Final-year Systems Engineering student with a strong focus on multiplatform software development, process automation, and emerging computing solutions. Specialist in creating dynamic, native interfaces using ReactJS, Flutter, and Dart, complemented by proficiency in Python, Java, and JavaScript. Experienced in designing relational and NoSQL data architectures, implementing neural network models, and optimizing workflows through automation. Proficient in Git/GitHub under Agile (Scrum) and Waterfall methodologies, dedicated to developing high-impact innovative technological solutions.

WORK EXPERIENCE AND ACADEMIC PROJECTS

Systems Engineering Intern | Unidad Oftalmológica de Caracas **Aug 2025 - Dic 2025**

- Developed an automated internal system for a clinical environment focused on the digital distribution, visualization, and delivery of medical reports, effectively optimizing information management and significantly reducing manual processing times. I built the desktop interface using React and Electron, implemented the core logic with a NestJS backend, and utilized MongoDB for NoSQL data modeling, while maintaining robust version control through Git and GitHub.

Database Development & Analysis **Apr 2025 - Jul 2025**

- Engineered a comprehensive relational database from scratch using PostgreSQL, performing detailed data analysis and structuring to develop complex queries and relationships that significantly optimized overall data retrieval and management.

AI Model Development **Apr 2025 - Jul 2025**

- Designed and programmed neural network models, including Multi-Layer Perceptrons (MLP), using Python to develop learning algorithms for data classification and prediction while applying core Artificial Intelligence principles.

Waraira Repano Hiking Schedule Website **Jan 2025 - Apr 2025**

- Creation and development of a hiking schedule website for the Waraira Repano National Park using React.js. The project included the implementation of interactive features and the application of UI/UX design principles to ensure a seamless and visually appealing user experience.

HABILIDADES

- **Programming Languages:** Python, Java, JavaScript, Dart.
- **Frontend & Mobile Development:** ReactJS, Flutter (Dart).
- **Languages:** English (B2), Spanish (Native).
- **Automation:** n8n.
- **Databases & Frameworks:** PostgreSQL, SQL, MongoDB, Firebase, Supabase, NestJS.
- **Data Analysis:** Microsoft Excel.
- **Backend Development:** REST APIs, Data Modeling, Frontend Integration.
- **Version Control:** Git, GitHub.
- **Methodologies:** Scrum (Agile), Waterfall.
- **Problem Solving:** Proficient in code debugging and system troubleshooting (e.g., web interface layouts and database performance).
- **Soft Skills:** Teamwork, effective communication, proactive mindset for process improvement, fast learner, efficient time management, consistency, and strong professional commitment.

EDUCACIÓN

B.S. in Systems Engineering — **Sep 2019 - Oct 2026**
Universidad Metropolitana

High School Diploma — **Sep 2014 - Jul 2019**
Colegio Emil Friedman

Data Science Fundamentals — **Nov 2024**
International Bussiness Machines Corporation. Duration: 7 hours.

Youth Leadership Course — **Jul 2025**
Olimpiadas Especiales de Venezuela. Duration: 6 hours

Minor in Software Development — **Nov 2025**
Universidad Metropolitana

EF SET English Certificate (B2 Upper Intermediate) — **Mar 2026**
EF SET. Duration: 90 minutes

App Programming from Scratch — **Mar 2026**
HoyAprendo. Duration: 5 hours
